POLS8042

Application Exercise 01 - First dataviz - UN Votes

- Go to RStudio Cloud and start `AE 01 - First dataviz - UN Votes` from the projects window.

- In the Files pane find the file called `unvotes.Rmd`.

- Open it and click "Knit".

- Then…

  - Go back to the file and and change your name on top (in the `yaml` — we'll talk about what this means later and knit again.

  - Change the country names to those you are interested in. Spelling and capitalisation must match how the countries appear in the data, so take a look at the appendix to confirm spelling.

  - Knit again. Congratulations! Your first data visualisation.
